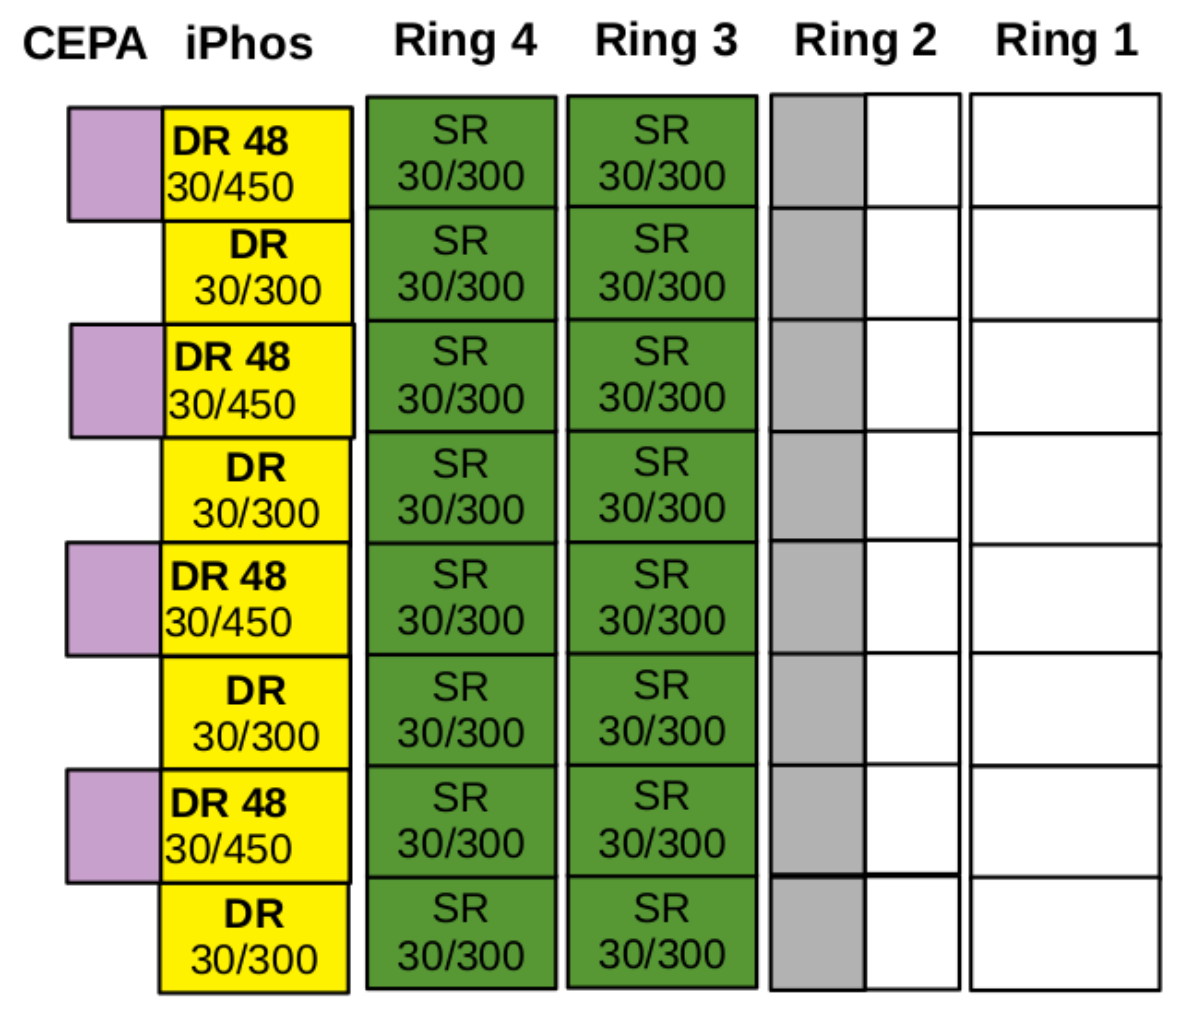
CALIFA Preamplifier Status for Exp. S091/118 - 2024



→ **CEPA**: 8 x 3/45pC DR Preamplifier

→ **iPhos:** mixed configuration:

8 x 3/45pC DR PA

8 x 3/30pC DR PA

→ **Barrel – Ring 4&3**: 32 x 3/30pC SR PA

→ **Backward Barrel (BB) – Ring 2:**

Bricolage of 16 PA (SR/DR)

What is still needed?

32 x SR 3/30pC PA for BB
(the current BB are spares for different applications)

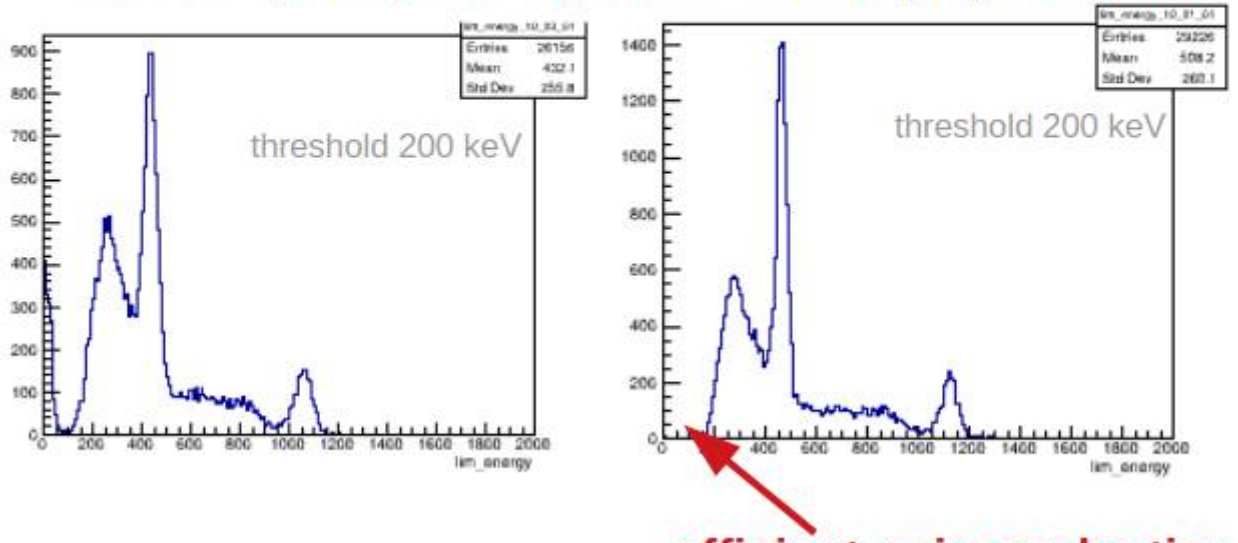
Modifications:
12x DR → to low noise input and 3/45pC range
32x SR → lower noise input stage

Optimization of S/N in Preamplifiers

Noise Optimization by Mesytec:

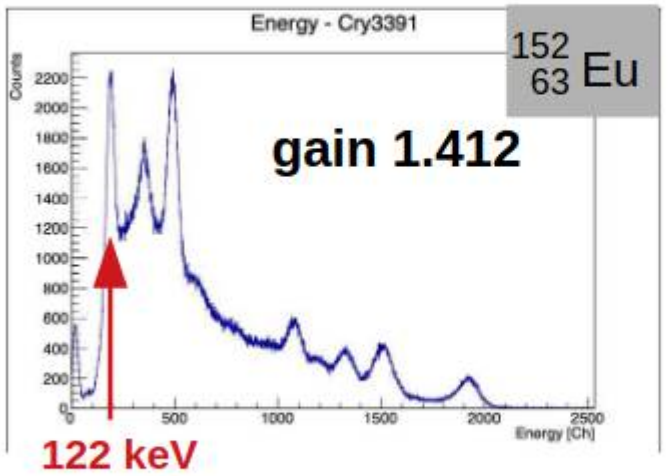
more current in input FET improve S/N ratio

reference preamplifier **low noise DR 3/45pC preamplifier**



Gain Optimization:

Stefan Eder's talk in R^{3}B Week in Budapest



larger APD gain – constant electronic noise

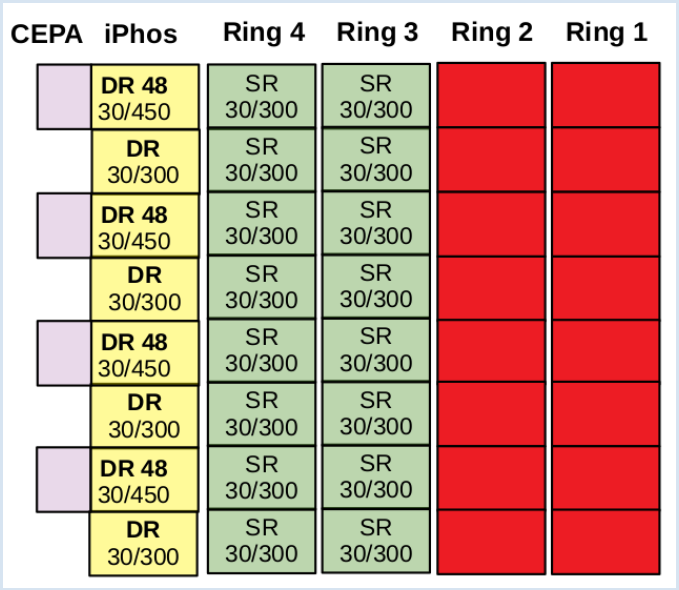
gain ~ S/N with N= const

3/45pC DR Preamplifiers:

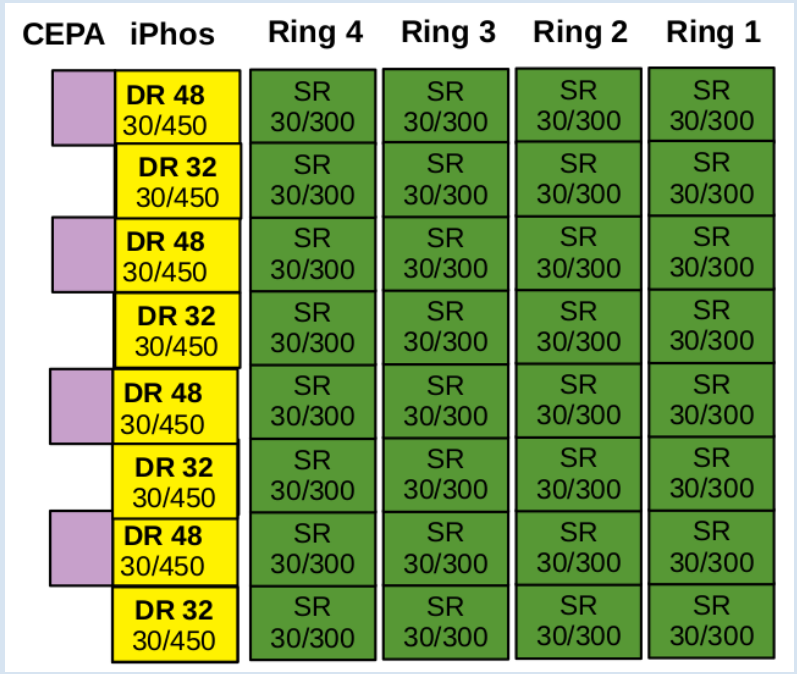
→ allow to increase gain → lower thresholds

→ 45pC covers full range up to 300 MeV

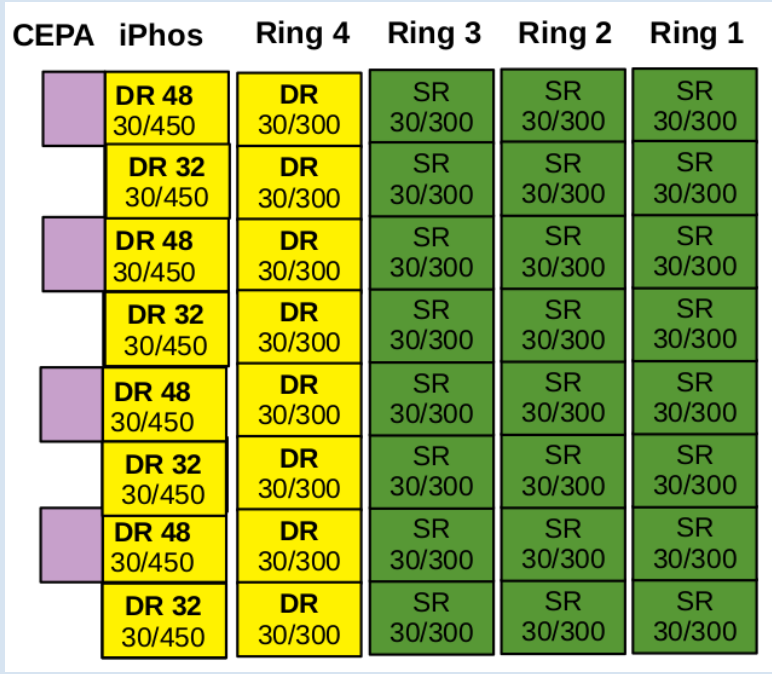
What we still need:



“Default Config.”



“4π Config.”



* in both versions all preamps are upgraded to lower noise input stage
