

CALIFA Electronics & DAQ

Supported by BMBF 05P15WOFNA and 05P19WOFN1.

The results presented here are based on the experiment s444/s473, which was performed at the beam line/infrastructure Cave C at the GSI Helmholtzzentrum für Schwerionenforschung, Darmstadt (Germany) in the frame of FAIR Phase-0.

	DR 30/300	SR 30/300	SR 30/300		

- **CEPA:** 8 x 3/45pC DR Preamplifier
- **iPhos:** mixed configuration:
 - 8 x 3/45pC DR PA
 - 8 x 3/30pC DR PA
- **Barrel – Ring 4&3:** 32 x 3/30pC SR PA
- **Backward Barrel (BB) – Ring 2:**
Bricolage of 16 PA (SR/DR)

What is still needed?

32 x SR 3/30pC PA for BB
(the current BB are spares for different applications)

Modifications:

12x DR → to low noise input and 3/45pC range
32x SR → lower noise input stage

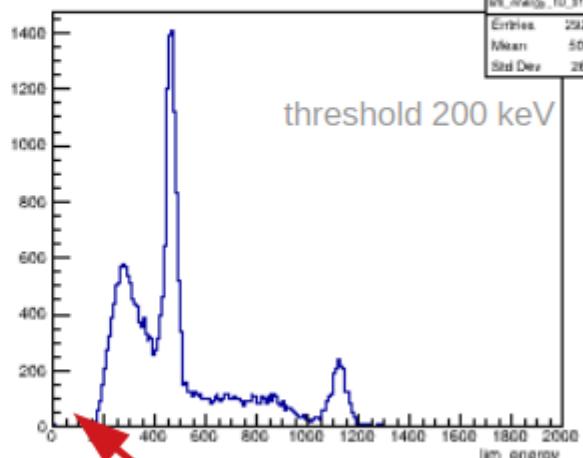

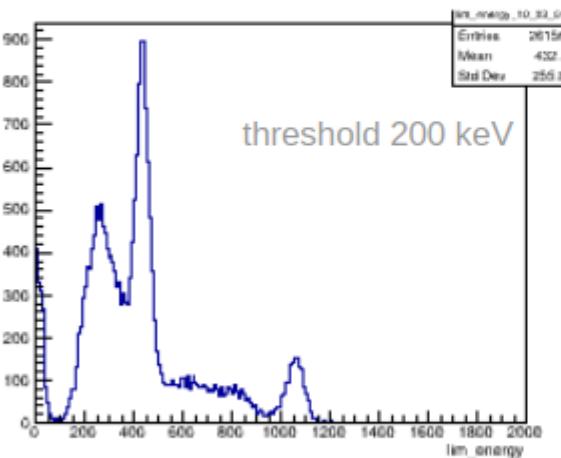

Optimization of S/N in Preamplifiers

Noise Optimization by Mesytec:

more current in input FET improve S/N ratio

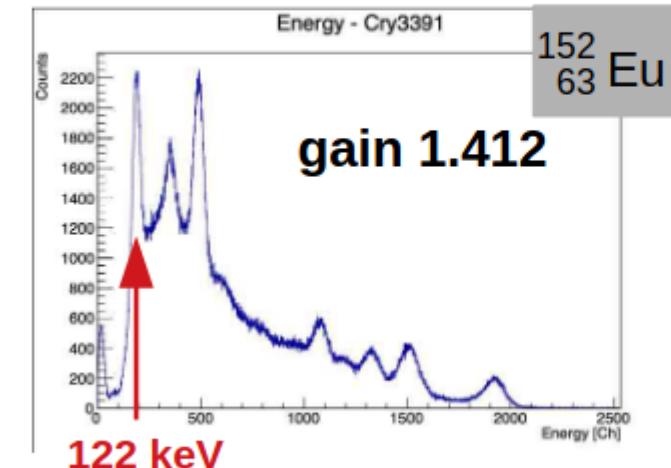

reference preamplifier

low noise DR 3/45pC preamplifier

Gain Optimization:

Stefan Eder's talk in R³B Week in Budapest

larger APD gain – constant electronic noise
gain ~ S/N with N= const

3/45pC DR Preamplifiers:

- allow to increase gain → lower thresholds
- 45pC covers full range up to 300 MeV

What we still need:

“Default Config.”

“4 π Config.”

- ✗ Load balancing
- ✗ 2+ LV modules needed
- ✗ Running sub-system with all three crates was not possible, unstable

Rack extension
already available

Already available or ordered:

- 5 Exploders
- 16+ FEBEX cards
- NIM Power Crate

Still to buy:

- LV Power Distributer Board
- 2 x PEXOR cards
- 2 x PEXARIA cards
- 2 x TRIXOR cards
- 2 x DAQ PCs
- 2 x TDK Lambdas

Costs: ~ 30k€

Outer Cabling for Backward Barrel

For “Default Config.”:

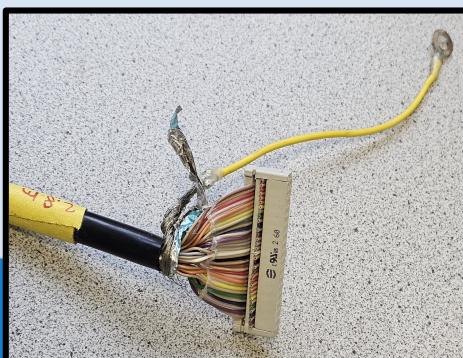

- 48+ SR cables need to be produced
- 16+ LV cables need to be produced

Components
on stock or
easily
available

Workload: ~ 1 month

Single Range (SR) cables

LV cables

For “4π Config.”:

- 16+ SR cables need to be produced
- 16+ LV cables need to be produced
- 32+ DR SCSI cables for Ring 4 and according Febex PCB adapters

Workload: 2 weeks

**No ~3.5 m SCSI cables available on
the market !**

SCSI cables

LED Gain Monitoring System

PCB-Boards with a mount for the fibre are installed/available

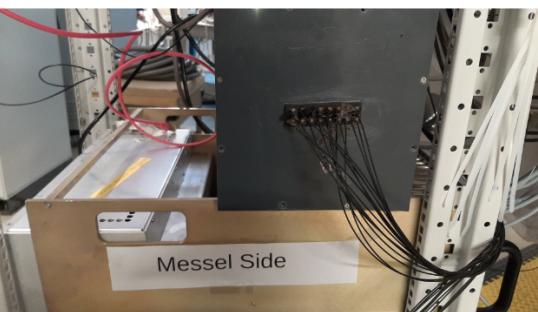

Revised
APD-PCB

New Coax

LED-system is mounted on Messel side,
16 fibres are connected

(a) The fibres connected to the adapter, which was glued to the box
(b) The gain monitoring system connected on the Messel beam-side of CALIFA

Next steps for the implementation in the HEC need to be defined!

Electronics Documentation Status

Google Sheets:

info about FAB,FEBEX,PAs, Exploders
commercial, lifetime, availability

Google Sheets

ELog:

info CALIFA cabling and slow-control
difficult to keep track and search for

R3BWiki:

overview page, more or less well structured
good as overview page, not suitable to store expert-documentation

Where to store documentation?

Cloud Storage for sharing and synchronising

EDMS - CERN's Engineering Data Management Service

How is documentation done by other WGs ? Synergy effects..

"Default Config."

Decision has to be taken:

"4π Config."
